

# Troop 993-Houston, TX Boy Scout Mosquito Net Frame

[www.troop993.org](http://www.troop993.org)

- Frame is made of ½ PVC pipe, cut with hacksaw to length
- Use connectors to join pipe, cement connectors to one end of pipe so they don't get lost (but don't cement everything so frame can be broken down for travel)
- Label the connections since your son will be assembling this on his own at camp, practice assembly before camp
- Fine tune width or length of poles for size of your own cot
- Cot is placed "inside" frame and secured to upper corners-plastic ties work well for this
- Mosquito net is approximately 39 x 59 x 79
- Place mosquito net inside frame, attach to frame using..... plastic ties – of course
- Best to fold mosquito net up under sleeping pad to seal off sleeping area – don't let drape to ground
- All PCV-about \$12 Lowes, netting-about \$10 Academy

## Pipe – all ½ inch PVC / Connectors:

○ Elbow  
right angle

△ T - right angle

□

3 sided right angle  
w adapter thread  
to straight pipe
